

I am a subscriber to XM satellite radio and love the service. I understand that the National Association of Broadcasters has submitted a petition, 04-160, that seeks to inhibit XM satellite radio from providing local traffic and weather content. This is a ridiculous anti-competitive petition and I urge you to reject it. If I am willing to pay money to listen to quality radio, I should not be prevented from receiving local content over that radio, minus the drivel of commercial broadcast radio!
